

XIP PhoneCard

XIP PhoneCard are functions to set up a pre-paid or billing based IP telephony business. XIP PhoneCard requires XIP Station.
XIP PhoneCard allows for easy adding and editing of phone card accounts as well as editing tariffs for different destinations.

What is a phone card?

- An account in XIP Station represented by 6 digits
- Preloaded with an amount of marks
- Marks are counting down depending on tariffs to different destinations (routes)

What is XIP PhoneCard?

- Manages phone card database
- Web-based administration:
 - Adding and editing of phone card accounts
 - Adding and editing of routes (Allowing or disallowing subscribers to call different destinations)
 - Editing tariffs for routes (Making different prices for destinations)

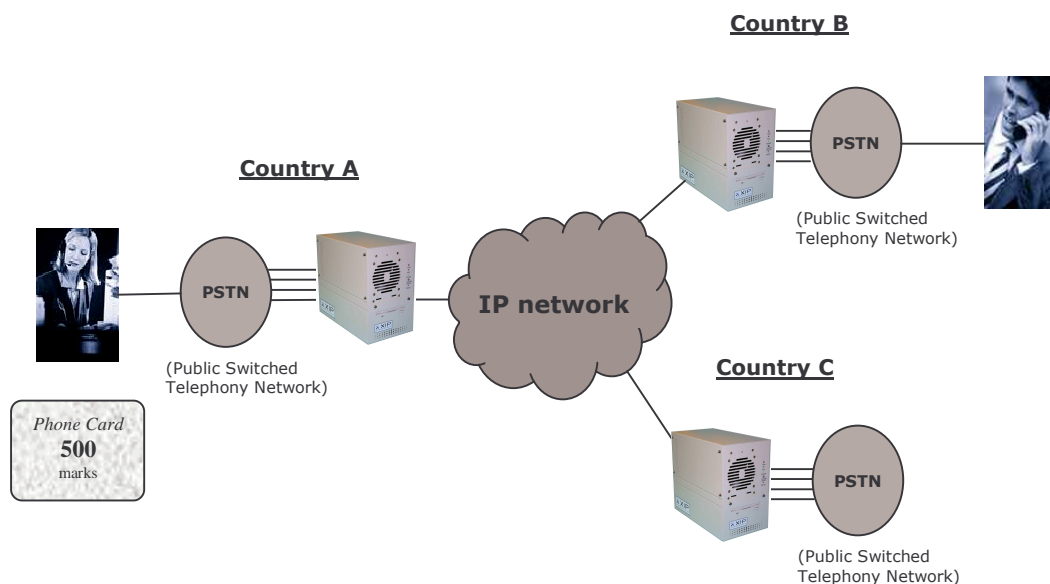

An example.

Minitel operator in country A produces phone cards and sells them to local customers.

Customers dial the local XIP Station, authenticates for dialling by entering the individual phone card number.

The phone call is routed over the IP network to a destination gateway in either country A or B. Marks are counting down on the phone card account.

Allowed destinations, phone card accounts and tariffing is managed by XIP PhoneCard functions.

Benefits and features

- Functions to set up a pre-paid IP telephony business.
- Better alternative than "Callback".
- Lower cost, due to IP-telephony.

Examples of user groups for XIP PhoneCard:

- Minitel operators (smaller long distance service providers)
- Internet Service Provider who want to offer a special service feature to their customers or include the XIP Station as part of their offer.
- Public telephone service for isolated locations
- Housing complexes with high concentrations of long distance users who call to a specific country where XIP Stations are located.
